DETAILED ACTION

Drawings

1. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 13 December 2001 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

2. New corrected drawings are required in this application because the current drawings are informal. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Reissue Applications

3. This application is objected to under 37 CFR 1.172(a) as the assignee has not established its ownership interest in the patent for which reissue is being requested. An assignee must establish its ownership interest in order to support the consent to a reissue application required by 37 CFR 1.172(a). The assignee's ownership interest is established by:

(a) filing in the reissue application evidence of a chain of title from the original owner to the assignee, or

Art Unit: 3747

(b) specifying in the record of the reissue application where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. See MPEP § 1410.01.

An appropriate paper satisfying the requirements of 37 CFR 3.73 must be submitted in reply to this Office action.

Specifically, the patent was assigned at the time of grant to an entity called "Diesel Engine Retarders" and therefore, it is unclear how the inventors are assigning the invention to "Jacobs Vehicle Systems, Inc." in the paper executed 19 December 1997.

4. The reissue oath/declaration filed with this application is defective because it fails to identify at least one error which is relied upon to support the reissue application. See 37 CFR 1.175(a)(1) and MPEP § 1414.

The applicant does not specifically state what the changes to the claims are, applicant must describe how the new claims differ from the patented claims.

5. Claims 1-50 are rejected as being based upon a defective reissue declaration under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the declaration is set forth in the discussion above in this Office action.

Art Unit: 3747

6. Claims 22-50 are rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter surrendered in the application for the patent upon which the present reissue is based. See *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984). A broadening aspect is present in the reissue which was not present in the application for patent. The record of the application for the patent shows that the broadening aspect (in the reissue) relates to subject matter that applicant previously surrendered during the prosecution of the application. Accordingly, the narrow scope of the claims in the patent was not an error within the meaning of 35 U.S.C. 251, and the broader scope surrendered in the application for the patent cannot be recaptured by the filing of the present reissue application.

Specifically, in the original patent application an amendment received on 19 May 1999 added language to independent claims 1 and 23 to overcome prior art rejections. This language included the phrase in claim 1 "wherein said braking means accomplishes at least two braking operations for the at least one exhaust valve per engine cycle during the engine braking operation, wherein said intake valve operating means delays the operation of the at least one intake valve during the engine braking operation. In claim 23 (which became patented claim 19) the language included two compression release events initiated prior to compression TDC and exhaust TDC and also delaying intake valve opening.

7. The original patent, or a statement as to loss or inaccessibility of the original patent, must be received before this reissue application can be allowed. See 37 CFR 1.178.

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 22,25,26 and 27 are rejected under 35 U.S.C. 102(b) as being anticipated by Hu (US Patent 5680841). See Figs. 8, 9 and 10. Note that during a positive power mode hydraulic fluid is supplied to the hydraulic passage while the exhaust lobe of the cam contacts the rocker and that during engine braking mode hydraulic fluid supply is cutoff to the hydraulic passage while the exhaust lobe contacts the rocker arm. This reads on applicants' claims. See claims 22,23 and 34.

10. The preliminary amendment does not comply with 37 CFR 1.173(b). The following changes are required.

on pg. 4, line 1, " Fig. 6 " should be - Fig. [5] 6 - ;

on pg. 4, line 4, " Fig. 6 " should be - Fig. [5] 6 - ;

on pg. 10, line 7, " opening 4 " should be - opening 4 - ;

on pg. 10, line 8, " cycle 3 " should be - cycle 3 -
